Executive Summary – Mind Map

FoodLabs Platform | AgNext Technologies

Overall Objective

- Transition from pilot execution to system stabilization and automation design
- Strengthen regulatory workflows and prepare FoodLabs for scalable deployment
- Align EIC and FSSAI processes into a unified ecosystem

1. **FSSAI Surveillance – Field Execution & Data Finalization**
   (Aligned with Food Safety and Standards Authority of India)
   - Represent AgNext during on-site FSSAI data collection visits
   - Complete normalization of remaining FSSR parameters
   - Cross-verify commodity and parameter mappings with officials
   - Finalize and obtain sign-off on master catalog (v2)
   - Remove discrepancies affecting workflow automation
   - Align normalized dataset with Inspeqt and FoodLabs workflows
   - Ensure Safe/Unsafe logic integrates correctly with master data

   Expected Outcome

   - Fully verified, automation-ready FSSAI master dataset
   - Clean parameter hierarchy for intelligent lab mapping

2. **EIC Pilot – Re-testing & Stabilization**
   (Aligned with Export Inspection Council)
   - Track ongoing bug fixes with development team
   - Maintain scrum tracking for all open items
   - Conduct structured post-fix re-testing
   - Validate approval workflows and record-locking logic
   - Perform end-to-end testing (Order → Sampling → Lab → Results → Report)
   - Re-test negative cases and edge scenarios
   - Conduct multi-role stability testing (Regulator, Sampler, Lab, Admin)
   - Update EIC workflow guidebook based on fixes

   Expected Outcome

   - Stable and validated EIC pilot
   - Reduced workflow breakpoints
   - System ready for scale and stakeholder confidence

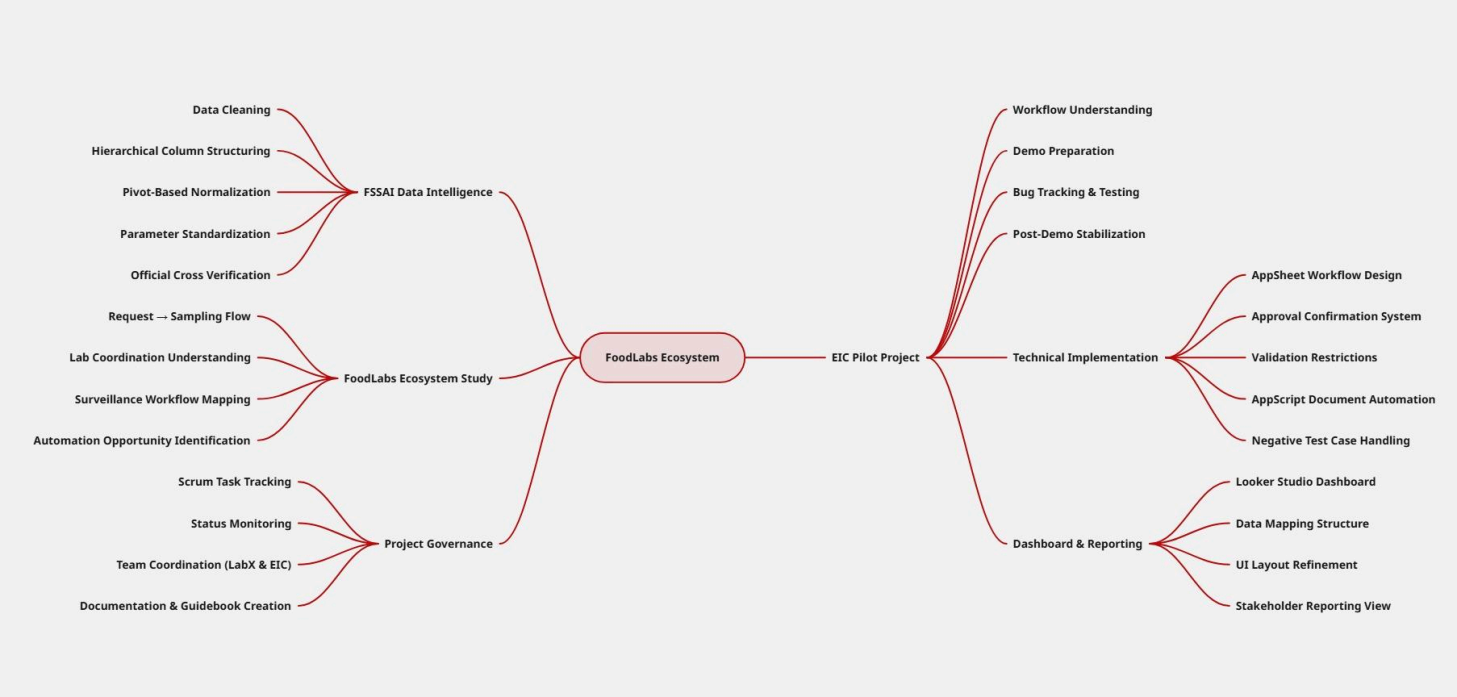
3. **FoodLabs Automation Ecosystem – Design Phase**
   (Under AgNext Technologies)
   - Map complete automation flow architecture
     - FSSAI Order → Parameter → Smart Lab Matcher → Lab Assignment → Results → Report
   - Design Smart Lab Matching Engine logic
     - Commodity + parameter-based certified lab suggestion
   - Define automated alert and notification triggers
   - Integrate Safe/Unsafe flag logic with normalized master data
   - Align EIC and FSSAI into unified FoodLabs pipeline
   - Identify automation gaps and manual intervention points
   - Create high-level ecosystem design blueprint

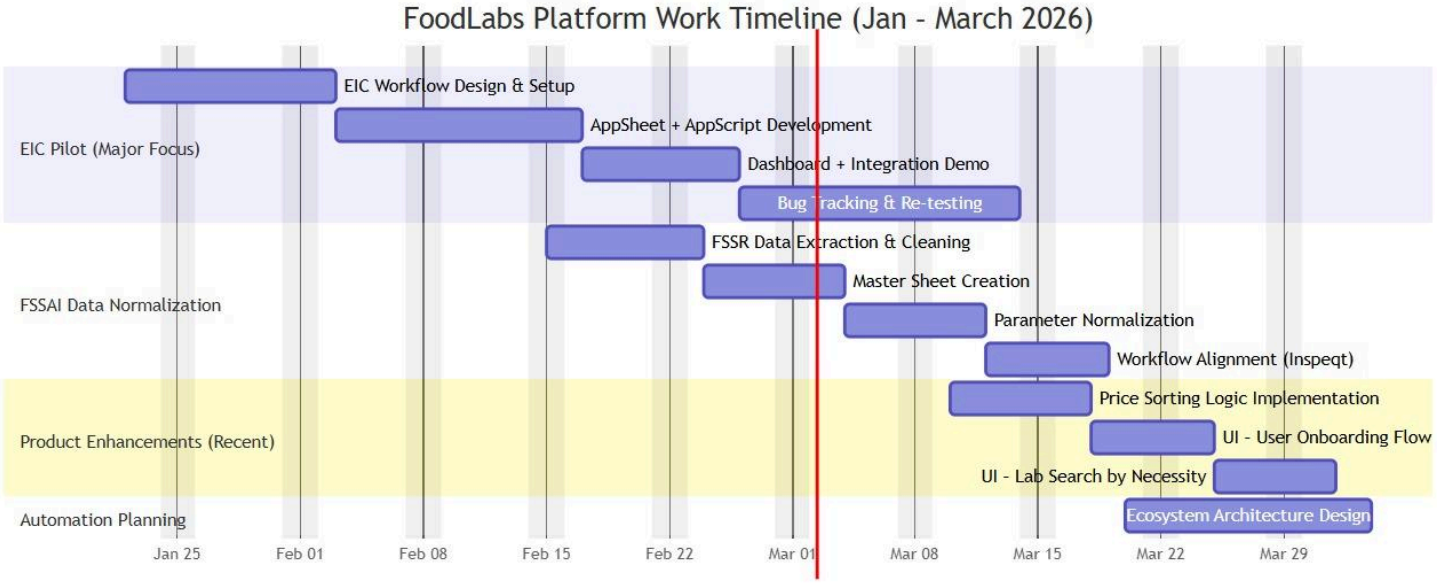
Expected Outcome

- Documented automation architecture
- Lab matching logic framework finalized
- Clear roadmap for ecosystem automation implementation

March Execution Targets

- FSSAI master sheet fully normalized and verified
- EIC pilot fully re-tested and stabilized
- Automation architecture blueprint completed
- Smart lab-matching engine concept finalized
- Unified regulatory workflow alignment achieved





FoodLabs Platform Work Timeline (Jan - March 2026)
EIC Pilot (Major Focus)
FSSAI Data Normalization
Product Enhancements (Recent)
Automation Planning
EIC Workflow Design & Setup
AppSheet + AppScript Development
Dashboard + Integration Demo
Bug Tracking & Re-testing
FSSR Data Extraction & Cleaning
Master Sheet Creation
Parameter Normalization
Workflow Alignment (Inspeqt)
Price Sorting Logic Implementation
UI - User Onboarding Flow
UI - Lab Search by Necessity
Ecosystem Architecture Design
